Proyek MBKM – Sistem Analisis Kesuburan Tanah Berdasarkan Unsur Hara PTPN 4 Regional III

Year Accomplished

2026

Role/Position

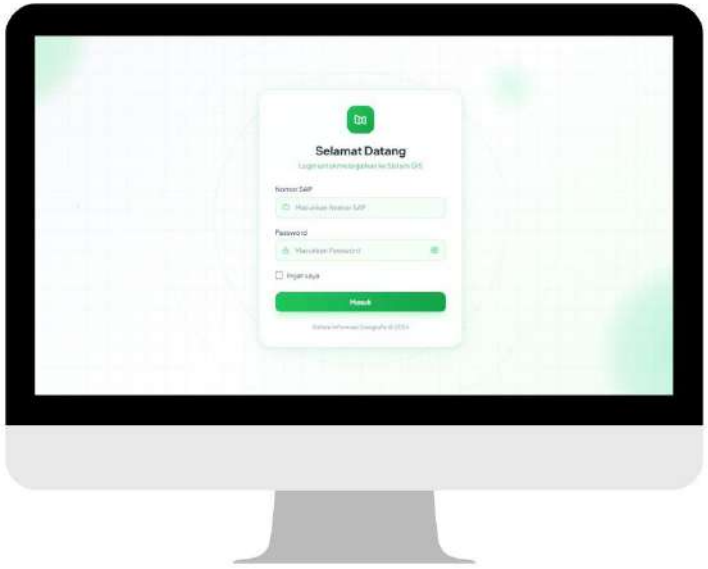

Front-end Developer

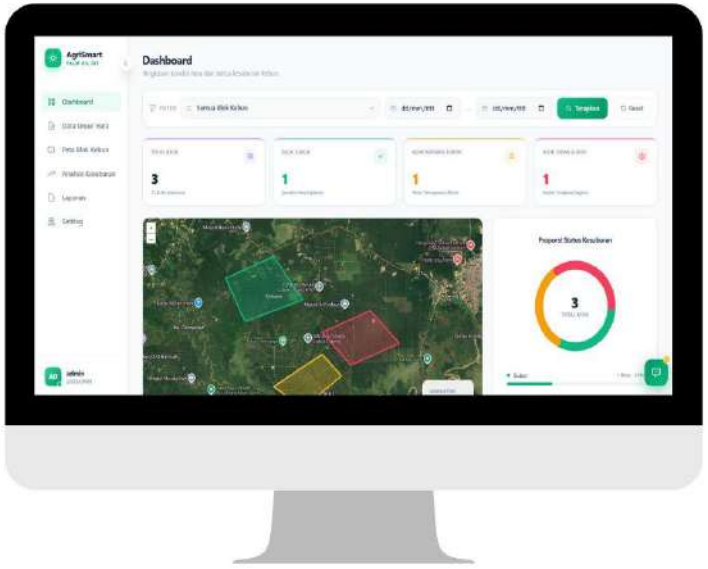

Publication Link

panduan.agrismart.

Artwork/Project Description

This group project aimed to develop a GIS-based soil fertility analysis system that evaluates soil nutrient content, determines fertility levels, and provides recommendations for land improvement. The system was developed using Laravel Livewire and integrated with a Gemini-powered chatbot to assist users in understanding analysis results and recommendations. I was responsible for designing and developing the frontend interfaces and user experience of the system.

Artwork/Project Title

Klasifikasi Sel Manusia Yang Terjangkit Malaria Menggunakan Metode CNN

Year Accomplished

2025

Role/Position

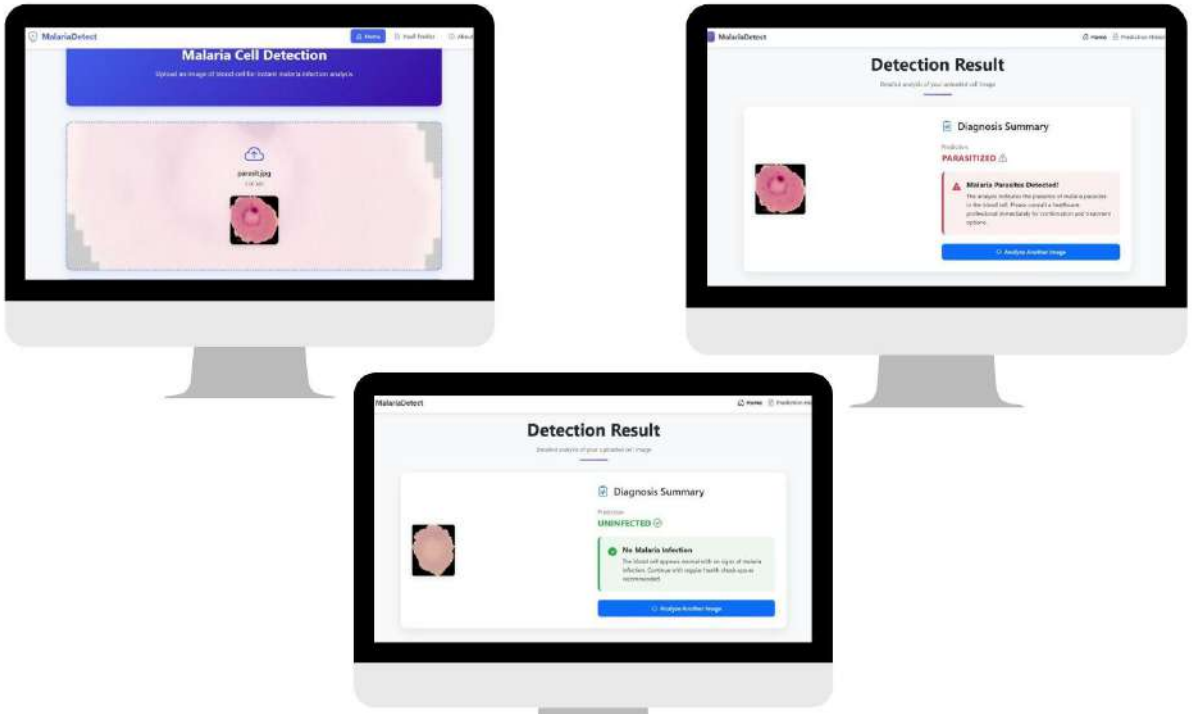

ML Engineer

Publication Link

malaria.detection.laporan.

Artwork/Project Description

This group project aimed to develop a malaria cell classification system using Convolutional Neural Networks (CNN) to analyze human cell images and identify malaria infections. As the Machine Learning Engineer, I was responsible for data preprocessing, model development, training, and performance evaluation as part of the deep learning implementation.
